Environmental Product Declaration ArcelorMittal – Organic coated steel coils Granite® and Estetic®

General Information

ArcelorMittal

Programme holder
IBU – Institut Bauen und Umwelt e.V.
Panoramastr. 1
10178 Berlin
Germany

Declaration number
EPD-ARM-20190058-CBD1-EN

This declaration is based on the product category rules:
Structural steels, 07.2014
(PCR checked and approved by the SVR)

Issue date
27/11/2019

Valid to
26/11/2024

Scope:
The Life Cycle Assessment is based on data collected from the ArcelorMittal plants producing organic coated steel, representing 95% of the production in 2014.

The owner of the declaration shall be liable for the underlying information and evidence; the IBU shall not be liable with respect to manufacturer information, life cycle assessment data and evidences.

Verification
The standard EN 15804 serves as the core PCR
Independent verification of the declaration and data according to ISO 14025:2010

Dipl. Ing. Hans Peters
(chairman of Institut Bauen und Umwelt e.V.)

Dr. Alexander Röder
(Managing Director Institut Bauen und Umwelt e.V.)

Mr. Carl-Otto Neven
(Independent verifier appointed by SVR)

Product

Product description/Product definition
This Environmental Product Declaration refers to organic coated steel coil in the Granite® and Estetic® product range. The Granite® and Estetic® range combines metallic coated steel substrates with a protective organic coating system to create robust products with longer life and high resistance.
Granite® & Estetic® prepainted steels are delivered in compliance with standard EN 10169. These two types of prepainted products are available in a wide range of steel grades aimed for architectural buildings for outdoor use (roofing, cladding) and indoor use (domestic appliance, industry, building parts) processed by drawing, roll forming, flanging or spinning.
Granite® & Estetic® prepainted steels are constituted of a metallic coating with coating masses from 18 to 350 g/m² and an organic coating with thicknesses as follows:
- Top side 25 µm to 70 µm for Granite® and 15 µm to 55 µm for Estetic®
- Back side 5 µm to 70 µm for Granite® and 5 µm to 25 µm for Estetic®

More info available at: https://industry.arcelormittal.com/catalogue#family_f

Application
ArcelorMittal’s colored organic coated steel coils comprise hot dip galvanized coils as a substrate over which organic coatings are applied. The coils are then delivered to manufacturers for shaping into end products to be included in building works, generally to precise dimensions, thereby avoiding losses on the construction site.
Organic coated steel is used in all sectors of industry. In building and construction, it is used as profiles for cladding, roofing, tiles, gutters etc.

Technical Data
The thickness of coatings (i.e. metallic layer plus organic coating) varies according to the intended end use of the products. Granite® is suitable for outdoor applications whereas Estetic® is preferred for indoor applications. Granite® and Estetic® products can be processed by bending, profiling, cold roll forming and deep drawing without damaging the top surface. They can be joined using techniques such as clinching, riveting and adhesive bonding. These products are in compliance with standard EN 10169+A1.

Organic coated steel coils

Owner of the declaration
ArcelorMittal Europe – Flat Products
24-26 Boulevard d’Avranches
L-1160 Luxembourg
Luxembourg

Declared product / declared unit
The declared unit is 1 m² of organic coated steel from the Granite® and Estetic® product range.

More info available at: https://industry.arcelormittal.com/catalogue#family_f

**Base materials/Ancillary materials**

The base material of steel is iron. Alloying elements are added on the form of ferroalloys or metals. The metallic coating includes only Zinc, Aluminum and Magnesium. The organic coatings are made from polyester, polyurethane or polyvinylidene fluoride (PVDF) resins.

ArcelorMittal’s organic coated steel is produced in full compliance with the European REACH Regulation (Registration, Evaluation, Authorization and Restriction of Chemicals). In particular, all coatings and surface treatments used for Granite® and Estetic® are free of hexavalent chromium compounds, which are substances of very high concern (SVHC) included in REACH Annex XIV, and hazardous heavy metals (Pb, Hg and Cd).

**Reference service life**

Construction process (stages A4 & A5) and Use stage (B1-B7) are not declared in this EPD. A reference service life for the Granite® and Estetic® product range is not declared, since the lifetime will depend on specific application as well as environmental conditions.

**LCA: Calculation rules**

**Declared Unit**

The declared unit is 1m² of organic coated steel in the Granite® and Estetic® product range.

**System boundary**

Type of the EPD: cradle to gate - with Options. Module A1-A3, Module C3 and module D were considered.

**Modules A1-A3** of the steel production include:

- The provision of resources, additives and energy
- Transport of resources and additives to the production site
- Production processes on site including energy, production of additives, disposal of production residues, and consideration of related emissions
- Recycling of production/manufacturing scrap. Steel scrap is assumed to reach the end-of-

- waste status once it is shredded and sorted, thus becomes input to the product system in the inventory.

**Module C3** takes into account the sorting and shredding of after-use steel, as well as the non-recovered scrap due to sorting efficiency which is landfilled. A conservative value of 2% landfill is considered.

**Module D** refers to the End-of-Life of the steel product, i.e. recycling.

**Data quality**

All relevant background datasets are taken from the GaBi software database GaBi ts Software. Regarding foreground data, this study is based on high quality of primary data, collected by ArcelorMittal. The GaBi-database contains consistent and documented datasets which can be viewed in the online GaBi documentation GaBi ts Documentation.

**Comparability**

Basically, a comparison or an evaluation of EPD data is only possible if all the data sets to be compared were created according to EN 15804 and the building context, respectively the product-specific characteristics of performance, are taken into account.

**LCA: Scenarios and additional technical information**

Current practice for the average organic coated steel consist of 98% recycling and 2% landfill according to the /European Commission Technical Steel Research/.

</tbody>
</table>

Note: 0.315 kg scrap is used to manufacture 4.67 kg of organic coated steel. After use, 4.57 kg steel is recycled. The potential environmental impact calculated for module D depends on the net amount of scrap left in the system, which is (4.57) - (0.315) kg = 4.26 kg. This means that the system generates a net output of 4.26 kg of steel scrap, thus module D shows an environmental benefit.
